Middleware

- ★ A middleware is a software that connects other software components or applications
- ★ Grid architectures are based on the aggregation of several services
- ★ A grid middleware must be able to integrate several heterogeneous resources (CPU, storage authentication, accounting, etc.) to provide a set of services

The gLite architecture consists of:

- ★ An Authorization and Authentication Service
- ★ A Job Management Service
- ★ A Data Management Service
- ★ An Information Service
- ★ An Accounting Service
- ★ A Monitoring Service
